Deconvolution - Wikipedia In optics and imaging, the term "deconvolution" is specifically used to refer to the process of reversing the optical distortion that takes place in an optical microscope, electron microscope, telescope, or other imaging instrument, thus creating clearer images.

Deconvolution - ImageJ The problem, and the solution. Any optical image forming system, such as a microscope objective lens, has the nasty property of killing more and more contrast of smaller and smaller features, up to the resolution (diffraction) limit, after which there is no contrast (and thus no resolution. deconvolution | Ãœbersetzung Englisch-Deutsch Kennst du Ãœbersetzungen, die noch nicht in diesem WÃ¶rterbuch enthalten sind? Deconvolution - an overview | ScienceDirect Topics Deconvolution. Deconvolution is a computational method that treats the image as an estimate of the true specimen intensity and using an expression for the point spread function performs the mathematical inverse of the imaging process to obtain an improved estimate of the image intensity. Deconvolution -- from Wolfram MathWorld The inversion of a convolution equation, i.e., the solution for  $f$  of an equation of the form  $f * g = h + \epsilon$ , given  $g$  and  $h$ , where  $\epsilon$  is the noise and  $*$  denotes the convolution. Deconvolution is ill-posed and will usually not have a unique solution even in the absence of noise. Linear deconvolution algorithms include inverse filtering and.
